

On-Site Anti-Tracking Forensic Phone Detector

Quickly identify whether mobile devices are placed in or under a vehicle

Protect your staff and investigation

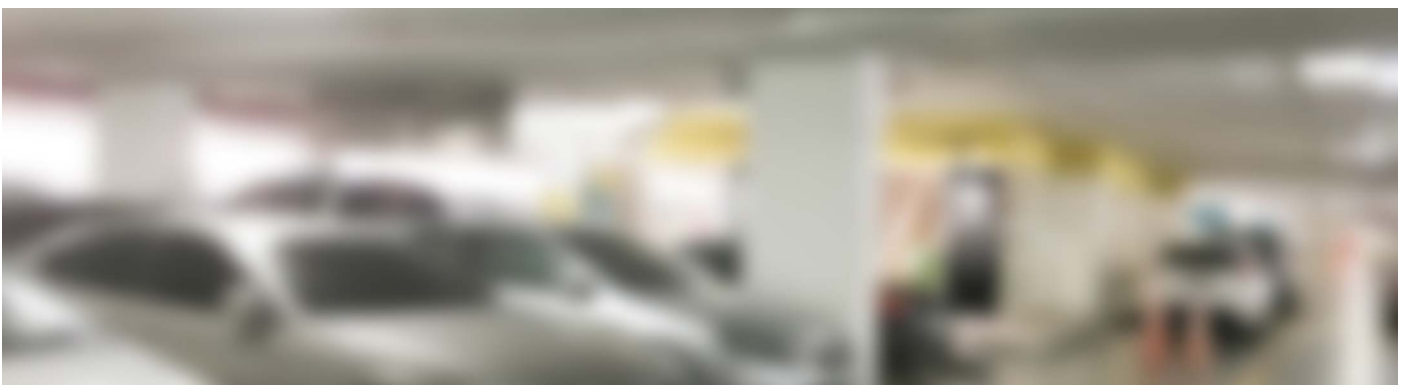

Prevent your staff from being tracked by criminals or state actors.

Also prevent them from knowing where your staff works and from finding out that they are operationally deployed, operating undercover or working for a government agency.

It does not matter whether your staff operates within their own country or abroad. You want them to be able to work safely at all times.

We understand that you constantly want to know if antagonists are tracking your staff by placing mobile devices and trackers in and under their vehicle.

By simply analyzing the vehicle by using the DoT Forensic Phone Detector.

Protect your staff and investigation.

1. Simply scan one or more vehicles of your staff before or upon arrival.
2. Ensure that no trackers have been placed under the car during the mission or mobile devices have been left on purpose without knowledge.
3. Easily know if your staff is being tracked by constantly scanning the wireless network during a ride. See at a glance which mobile devices are frequently detected during the ride.
4. Easily see whether it concerns and what type of IoT or mobile devices.
5. Easily white and blacklist authorized or unauthorized devices.

Multi-spectrum: LTE, GSM, Wi-Fi Portable Forensics Phone Detector

Detect LTE trackers & mobile phones on the LTE spectrum

With the objective of detecting LTE devices that are difficult to downgrade to GSM

Detect GSM devices operating on the GSM-spectrum

Detect LTE + GSM trackers/phones placed under and/or placed in vehicles

Detecting WiFi + LTE + GSM devices while driving, during an operation

Retrieving and determining the IMSI during the detection

- Country origin provider

- Connected SIM provider

Retrieving device information by multi wireless protocols

- Identify type IoT device

- Identify mobile or IoT device

- Identify mobile or IoT brand

Option to determine signal strength per vehicle

- Targeted detection through hardware configurations

- Increase or reduce the signal strength by means of antennas

The stand-alone DoT Portable Forensic Phone Detector can work:

- Autonomous where all information is stored locally, able to be viewed instantly

- Connected to an on-premise host, using an encrypted connection

- Independent of external power supplies through a built-in power bank

Portable Digital Anti-Tracking & Forensic Phone Detector

With an off-the-shelf pricing of € 24.000 (excl. VAT).
Which will be delivered within four weeks after payment.
