

On-Site Forensic Phone Detector

Quickly identify whether mobile devices have been left in a vehicle.

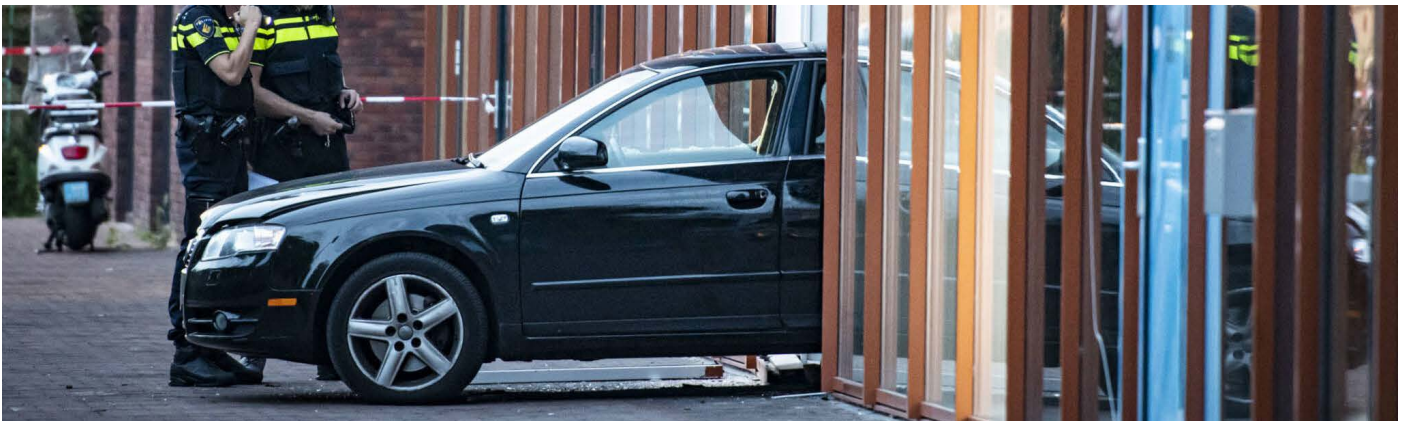

When for example a ram raid has been committed you want to find all the forensic evidence as soon as possible. Especially in a time where mobile mobile devices are used or carried by ram raid suspects.

We understand that you want to know if suspects' mobile devices have been left behind. And even know that the worn mobile devices are unconsciously connected to IoT systems within the vehicle.

Without having to disassemble a vehicle.

Or conducting an extensive search of mobile devices at the crime scene of the ram raid.

Simply analyze the vehicle by using the DoT Forensic Phone Detector.

Why quickly identify whether mobile devices have been left in a vehicle?

1. Mobile devices used or carried by suspects may be forgotten or lost in a ram raid and can be remotely wiped, destroying the digital evidence.
2. Suspects can flee abroad and exchange SIM cards, smartphones and again other vehicles.
3. When transporting the car to a forensic lab, the evidence can be compromised.

X-Surveillance has developed an easy to use, unobtrusive portable ruggedized, multi-spectrum, Forensic & Evidence collecting Forensic Phone Detector.

Operational on location within minutes.

Multi-spectrum: LTE, GSM, Wi-Fi Portable Forensics Phone Detector

Detect LTE devices semi-passively

No jamming to downgrade to GSM

Detect GSM devices that operate standard on the GSM-protocol

Detect beacons/phones left behind and/or placed in vehicles

Detecting E-Call systems in a vehicle

Retrieving and determining the IMSI during the detection

Country origin provider

Connected SIM provider

Retrieving device information by multi wireless protocols

- Identify type IoT device

- Identify mobile or IoT device

- Identify mobile or IoT brand

Option to determine signal strength per vehicle

- Targeted detection through hardware configurations

- Increase or reduce the signal strength by means of antennas

The stand-alone DoT Portable Forensic Phone Detector can work:

- Autonomous where all information is stored locally, able to be viewed instantly

- Connected to an on-premise host, using an encrypted connection

- Independent of external power supplies through a built-in power bank

Portable Digital Evidence & Forensic Phone Detector

With an off-the-shelf pricing of € 24.000 (excl. VAT).
Which will be delivered within four weeks after payment.

Saving you and your forensic team many hours manually searching for mobile devices, reducing the need to wait for all of the other (such as biological, print, trace) evidence investigations to have been performed.

Forensic Phone Detection made easy.
